

## **ANNOTATION MADE EASY AND ECONOMICAL ELMO EVR-100 PORTABLE ANNOTATION MODULE**

Once again ELMO leads the industry with the first portable Annotation Module designed to be used with any ELMO Visual Presenter. Now you can annotate over fragile documents, photos, drawings or any flat art without the worry of damaging it. Just pick up a fiber tip pen and write to your hearts content. You can even save the annotations or notes to your VCR or hard drive (digital USB Models).

No longer do you have to annotate using a mouse. Do it simply and easily by writing in longhand or printing to highlight an important point. This handy accessory is particularly useful for enhancing presentations to students, corporate and sales/marketing personnel as well as to customers and colleagues.

Most important, the ELMO EVR-100 Annotation Module fits every ELMO Visual Presenter ever manufactured – that means millions could use this incredibly useful device. Add to that the fact that this user friendly, easy-to-install, lightweight module requires no computer, no power supply, and no special tools – just set it and forget it ! Most important of all is the cost and it will stun you ! No longer is it necessary to purchase outrageously expensive document camera products just to have the privilege of annotating.

For those who wish it is also available with an optional SV-450 backlight which makes it a snap to view x rays, film negatives, etc.
